Realtime, Easy Access to Field Ticket Data

WolfePak Mobile Midstream is a fully integrated mobile electronic ticketing solution for collecting and managing crude oil run tickets and water tickets. Companies can manage the full life cycle of run tickets including driver dispatch, gross & net barrel calculations and run statement processing.

IMPROVED OPERATIONS

WolfePak Mobile Midstream is an effective truck dispatching tool that provides real time records tracking and serves as a single point for data storage and access, enabling improved operations reporting.

The WolfePak electronic ticketing and dispatching system eliminates the guess work when trying to solve various business challenges such as optimizing dispatch routes, reducing wasted capacity and maximizing truck profitability.

INCREASED DATA ACCURACY

Managing the accurate transfer of data from the field to the back office can be challenging. WolfePak Mobile Midstream makes data entry easier and more accurate, which enables faster invoicing and better analytics.

Through default parameters, unique to your business, WolfePak Mobile Midstream prevents common data entry errors or mis-keyed information. By setting truck capacity to a set number of barrels, it forces the driver to reconcile any potential errors before printing and leaving a ticket.
